FortiAnalyzer 6.0.12 Upgrade Guide
05-6012-918300-20230608

TABLE OF CONTENTS

Introduction

This document describes how to upgrade FortiAnalyzer to 6.0.12. This guide is intended to supplement the *FortiAnalyzer Release Notes*, and it includes the following sections:

Firmware best practice: Stay current on patch releases for your current major release. Only upgrade to a new major release or version when you are looking for specific functionality in the new major release or version. For more information, see the *FortiAnalyzer Release Notes*, or contact Fortinet Customer Service & Support (https://support.fortinet.com/).

Upgrade FortiAnalyzer before upgrading FortiOS, and be sure to maintain release version compatibility at all times.

Preparing to Upgrade FortiAnalyzer

We recommend performing the following tasks to prepare for a successful upgrade of a FortiAnalyzer unit. Following is a summary of the preparation tasks and a link to the details for each task.

To prepare for upgrading FortiAnalyzer (summary):

1. Download release notes, firmware images, and SNMP MIB files. See Downloading files from Customer Service & Support on page 5.
2. Review release notes. See Reviewing FortiAnalyzer 6.0.12 Release Notes on page 8.
3. Plan when to perform the upgrade. See Planning when to upgrade on page 8.
4. Review the status of managed devices. See Reviewing status of managed devices on page 8.
5. Review FortiAnalyzer System Settings pane. See Reviewing FortiAnalyzer System Settings on page 10.
6. Back up configuration files and databases. See Backing up configuration files and databases on page 10.
7. Back up logs. See Backing up logs on page 11.
8. Check reports. See Checking reports on page 11
9. Clone VM instances. See Creating a snapshot of VM instances on page 12.

Downloading files from Customer Service & Support

You can download release notes and firmware images from the Fortinet Customer Service & Support portal at https://support.fortinet.com. If you are using SNMP to monitor equipment, you can also download MIB files from the Fortinet Customer Service & Support portal.

This section contains the following topics:

Downloading release notes and firmware images

Firmware images are located on the Fortinet Customer Service & Support portal, and they are organized by firmware version, major release, and patch release.

For information about the naming convention of firmware images and VM firmware images, see FortiAnalyzer firmware images on page 7, FortiAnalyzer VM firmware images on page 7, and Build numbers on page 7.

We recommend running an MD5 checksum on the firmware image file.

To download release notes and firmware images:

1. Log in to the Fortinet Customer Service & Support portal at https://support.fortinet.com.
2. Go to *Download* > *Firmware Images*.
3. In the *Select Product* dropdown list, select *FortiAnalyzer*.
4. Download the release notes for the 6.0.12 build:
   a. On the *Release Notes* tab, click the *6.0.12 Build <number>* link.
   The Document Library is displayed.
   b. Download the release notes.
5. Download the firmware image:
   a. Return to the Fortinet Customer Service & Support portal, and click the *Download* tab.
   b. Go to the *v6.00* > *6.0* > *6.0.12* folder, and locate the firmware image for your device or VM.
   c. Download the firmware image by clicking the *HTTPS* link.
   An HTTPS connection is used to download the firmware image.
   d. Click the *Checksum* link for the image that you downloaded.
   The image file name and checksum code are displayed in the *Get Checksum Code* dialog box.
   e. Confirm that the checksum of the downloaded image file matches the checksum provided on the download site.

Downloading MIB files for SNMP

If you are not using SNMP to monitor equipment, you can skip this procedure.

If you are using SNMP to monitor equipment, download the following MIB files from the Fortinet Customer Service & Support portal:

- *FORTINET-FORTIMANAGER-FORTIANALYZER-MIB.mib*, which is used with both FortiManager and FortiAnalyzer
- Fortinet Core MIB file, which is used with all Fortinet products

To download SNMP MIB files:

1. Log in to the Fortinet Customer Service & Support portal at https://support.fortinet.com.
2. Go to *Download* > *Firmware Images*.
3. In the *Select Product* dropdown list, select *FortiAnalyzer*.
4. Download the MIB file for the FortiAnalyzer 6.0.12 release:
   a. On the *Download* tab, go to the *v6.00* > *6.0* > *6.0.12* > *MIB* folder.
   b. Download the MIB file by clicking the *HTTPS* link.
   An HTTPS connection is used to download the firmware image.
   c. Click the *Checksum* link for the image that you downloaded.
   The image file name and checksum code are displayed in the *Get Checksum Code* dialog box.
   d. Confirm that the checksum of the downloaded image file matches the checksum provided on the download site.

5. Download the Fortinet Core MIB file:
   a. On the *Download* tab, go to the *v6.00* > *Core MIB* folder.
   b. Download the MIB file by clicking the *HTTPS* link.
   An HTTPS connection is used to download the firmware image.
   c. Click the *Checksum* link for the image that you downloaded.
   The image file name and checksum code are displayed in the *Get Checksum Code* dialog box.
   d. Confirm that the checksum of the downloaded image file matches the checksum provided on the download site.

FortiAnalyzer firmware images

The firmware images in the folders follow a specific naming convention, and each firmware image is specific to the device model or VM.

For example, the `FAZ_1000D-v6-build0457-FORTINET.out` image found in the */FortiAnalyzer/v6.00/6.0/6.0.0/* folder is specific to the FortiAnalyzer 1000D device model.

FortiAnalyzer VM firmware images

Fortinet provides FortiAnalyzer VM firmware images for a number of virtualization environments.

Firmware images follow a specific naming convention, and each firmware image is specific to the VM environment. All firmware images for VM upgrades have filenames that end with `.out`.

For example, the `FAZ_VM64_HV-v6-build0457-FORTINET.out` image is specific to upgrade for the Hyper-V platform.

For more information, see the FortiAnalyzer data sheet at https://www.fortinet.com/products/management/fortianalyzer.html.

VM installation guides are available in the Fortinet Document Library.

FortiAnalyzer 5.6.0 and later uses a different network interface mapping for ESX VM networks. After upgrading to FortiAnalyzer 6.0.12, edit the ESX VM network mapping to preserve network connectivity.

- port1 — Network Adapter 1
- port2 — Network Adapter 2
- port3 — Network Adapter 3
- port4 — Network Adapter 4

New FortiAnalyzer 6.0.12 VM installations use the correct mapping with ESX 5.5 and later.

Build numbers

Firmware images are generally documented as build numbers. New models may be released from a branch of the regular firmware release. As such, the build number found in the *System Settings* > *Dashboard* > *System Information* widget and the output from the `get system status` CLI command displays this four-digit build number as the build number.

To confirm that you are running the proper build, the output from the `get system status` CLI command has a `Branch Point` field that displays the regular build number.

Ensure that FortiAnalyzer 6.0.12 can run on your FortiAnalyzer model. See Supported Models on page 20.

Reviewing FortiAnalyzer 6.0.12 Release Notes

After you download the release notes for FortiAnalyzer 6.0.12, review the special notices, upgrade information, product integration and support, resolved issues, and known issues.

Planning when to upgrade

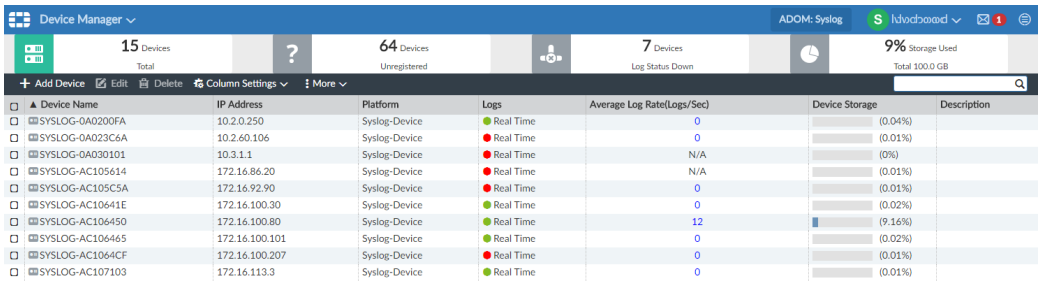
Plan a maintenance window to complete the firmware upgrade. If possible, you may want to set up a test environment to ensure that the upgrade does not negatively impact your network or managed devices.

Reviewing status of managed devices

Before starting an upgrade, use the *Device Manager* pane to review the status of all logging devices to ensure 0 devices have a status of *Log Status Down*.

Either correct devices with a *Log Status Down* status or make note of them prior to starting the upgrade.

Following is an example of the *Device Manager* pane with 7 devices that have a status of *Log Status Down*.



You can use the following CLI commands to review the status of managed devices. Use this command to check that device and ADOM disk quota are correct before and after the upgrade.

- `diagnose log device`

This section contains the following topics:

CLI example of diagnose log device

Run this command before the upgrade and keep the output. After the upgrade, run this command again and check that device and ADOM disk quota are correct.

Following is an example of the CLI output for the `diagnose log device` command:

```
FAZ1000E # diagnose log device
Device Name  Device ID   Used Space(logs/quarantine/content/IPS) Allocated Space Used%
CSF-81E-HA   FGHA0815848309_CID 163.4MB( 163.4MB/ 0.0KB/ 0.0KB/ 0.0KB) unlimited n/a

Reserved space: 300.0GB ( 2.7% of total space).
```

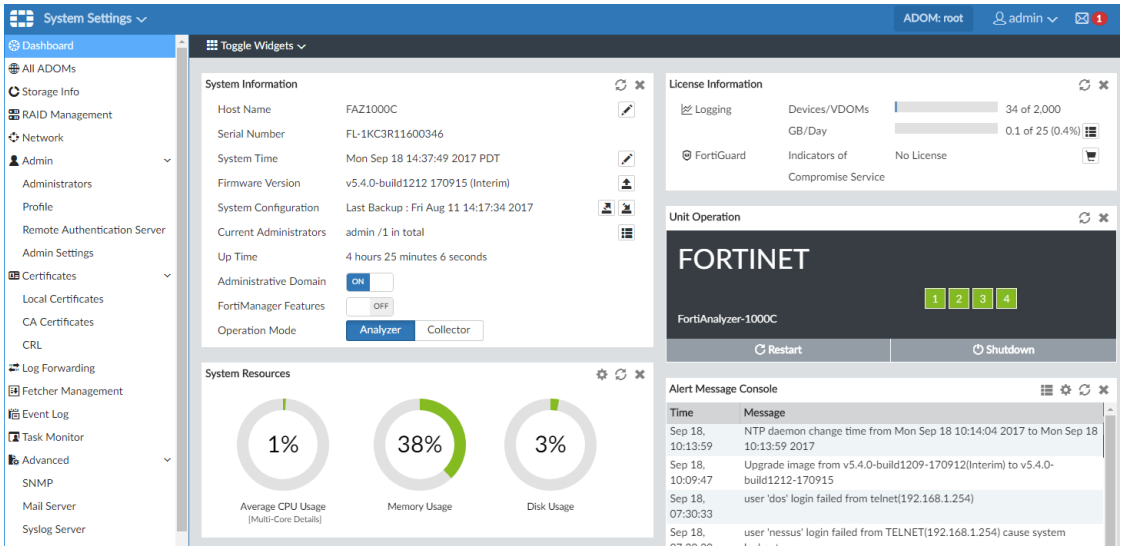
Reviewing FortiAnalyzer System Settings

Before starting an upgrade, go to *System Settings* to review the following widgets:

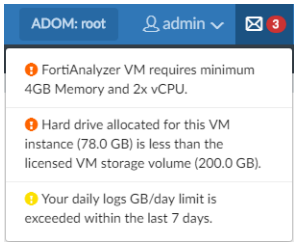
- License Information widget
- System Resources widget to check for high memory and CPU usage

It is also recommended to check the Alert Message Console and the list of notifications.

Following is an example of the *System Settings Dashboard* with the *License Information* and *System Resources* widgets:



Following is an example of the Notification list:



Backing up configuration files and databases

Back up the FortiAnalyzer configuration file and databases.

It is recommended that you create a system backup file and save this configuration to your local computer. The device configuration file is saved with a `.dat` extension.

It is also recommended that you verify the integrity of your backup file.

When the database is larger than 2.8 GB, back up the configuration file to an FTP, SFTP, or SCP server using the following CLI command:

```
execute backup all-settings {ftp | sftp} <ip> <path/filename of
    server> <username on server> <password> <crptpasswd>
execute backup all-settings scp <ip> <path/filename of server> <SSH
    certificate> <crptpasswd>
```

For more information, see the *FortiAnalyzer CLI Reference*.

To verify the integrity of a backup file:

1. Go to *System Settings* > *Dashboard*.
2. In the *System Information* widget, click *Backup*. The *Backup* dialog box opens.
3. In the `Encryption` line, deselect the checkbox so that the backup is not encrypted.
4. Click *OK* and save the backup file on your local computer.
5. Locate the backup file and change the file extension from `.dat` to `.tgz`.
6. Decompress the backup file and verify that the decompression is successful.

If the decompression fails, then the backup process has likely also failed.

To back up your system configuration:

1. Go to *System Settings* > *Dashboard*.
2. In the *System Information* widget, click *Backup*. The *Backup* dialog box opens.
3. If you wish, select the checkbox to encrypt the backup file, and enter a password.
4. Click *OK* and save the backup file on your local computer.

If you encrypt the backup file, you must use the same password to restore this backup file.

Backing up logs

It is recommended to back up logs before an upgrade.

It is also recommended to send logs to a temporary FortiAnalyzer or syslog server during the upgrade.

Checking reports

Wait until all the running reports are completed, and ensure that no reports are scheduled to run during the upgrade.

You can use the following CLI commands to check for running and pending reports:

```
FAZ1000D # dia report status running
FAZ1000D # dia report status pending
```

Creating a snapshot of VM instances

In VM environments, it is recommended to stop the VM instance and take a snapshot or clone of the VM instance before the upgrade. If there are issues with the upgrade, you can revert to the VM snapshot or clone.

Avoid taking snapshots when applications in the virtual machine are communicating with other computers.

If you are upgrading a FortiAnalyzer VM, make sure your VM partition has more than 512MB (1024MB or more recommended) and your VM server is up to date.

Upgrading FortiAnalyzer

You can upgrade FortiAnalyzer 5.6.0 or later to FortiAnalyzer 6.0.12. If you are upgrading from versions earlier than 5.6.0, you must upgrade to FortiAnalyzer 5.6 first, and then to 6.0.12. We recommend that you upgrade to the latest version of FortiAnalyzer 5.6.

After upgrading from FortiAnalyzer 5.2 to 5.4:

Wait until the database rebuild status is greater than 2%, and then continue the upgrade to FortiAnalyzer 5.6 or later.

When upgrading from FortiAnalyzer 5.4.0 and later:

You are not required to wait for a database rebuild before upgrading to the next firmware release in your upgrade path, if your upgrade path involves multiple steps.

For other upgrade paths, see Firmware Upgrade Paths on page 21.

This section contains the following topics:

Upgrading the device firmware can trigger an SQL database rebuild. New logs are not available until the rebuild is complete. The time required to rebuild the database depends on the size of the database. You can use the `diagnose sql status rebuild-db` command to display the SQL log database rebuild status.

The following features are available until the SQL database rebuild is complete: *FortiView*, *Log View*, *Event Management*, and *Reports*.

Upgrading FortiAnalyzer Firmware

This section describes how to upgrade FortiAnalyzer firmware.

Fortinet recommends uploading firmware to FortiAnalyzer by using a server that is in the same location as the FortiAnalyzer. This helps avoid timeouts.

For the Collector-Analyzer architecture upgrade, Fortinet recommends upgrading the Analyzer first. Upgrading the Collector first might affect the Analyzer's performance.

To upgrade firmware for a cluster, Fortinet recommends upgrading the HA secondary units first, followed by the HA primary unit last. To avoid losing log information, wait until each FAZ upgrade has finished before proceeding to the next.

To upgrade firmware:

1. Go to *System Settings* > *Dashboard*.
2. In the *System Information* widget, go to the *Firmware Version* field, and click the *Upgrade Firmware* icon.
3. In the *Firmware Upload* dialog box, click *Browse* to locate the firmware package (`.out` file) that you downloaded from the Customer Service & Support portal, and click *Open*.
4. Click *OK*.
   The firmware image is uploaded. When the upgrade completes, a message confirms a successful upgrade.
   It is recommended to view the console log output during upgrade. See Checking FortiAnalyzer log output on page 14.
5. When the login window displays, log into FortiAnalyzer.

   When the upgrade completes, you might have to refresh your web browser to see the login window.

6. If the database needs rebuilding, you can monitor the rebuild status by double-clicking the *Rebuilding DB* status in the toolbar.

   The rebuild process includes two steps. When it's done, you see the *Rebuilding log database was completed* message.

   Some features are unavailable while the SQL database is rebuilding.

7. Review the *System Settings* > *Event Log* for any additional errors. See Checking FortiAnalyzer events on page 15.

Optionally, you can upgrade firmware stored on an FTP or TFTP server using the following CLI command:

```
execute restore image {ftp | tftp} <file path to server> <IP of
    server> <username on server> <password>
```

For more information, see the *FortiAnalyzer CLI Reference*.

Checking FortiAnalyzer log output

While upgrading a FortiAnalyzer unit, use the console to check the log output in real-time. Check for any errors or warnings.

Following is a sample console output of an upgrade:

```
Serial number:FAZ-VM0000000001
Upgrading geography IP data...Done.
Initialize file systems...
Old version: v5.4.3-build1187 branchpt1187 170518 (GA)
New version: v5.4.4-build1220 branchpt1220 170928 (GA)
Global DB running version is 429, built-in DB schema version is 429
Upgrading report config from version:5. patch:3, branch point:1187
   Exporting existing config... (step 1/4)
      export (13/13) adoms. took 14 sec.
   Initializing default config... (step 2/4)
      init (13/13) adoms. took 12 sec.
   Upgrading existing config... (step 3/4)
      Upgrading V5.4.2->V5.4.3...
         process (13/13) adoms. took 19 sec.
   Importing upgraded config... (step 4/4)
      import (13/13) adoms. took 10 sec.
Upgrade report config completed. took 55 sec.
```

Checking FortiAnalyzer events

After upgrading, it is recommended to check all messages logged to the FortiAnalyzer Event Log. If you find any errors, you can fix the errors before continuing.

Following is an example of messages in the FortiAnalyzer Event Log:

Date Time	Level	User	Sub Type	Message
2017-09-17 20:00:07	warning	system	FortiAnalyzer event	Dropped 2 log database tables before 2017-07-19 20:00:00 from Adom root due to Adom retention policy.
2017-09-17 20:00:00	warning	system	FortiAnalyzer event	Requested to trim database tables older than 60 days to enforce the retention policy of Adom root.
2017-09-17 12:11:37	information	system	FortiAnalyzer event	fazcfgd update webfilter categories files: status='successful'.
2017-09-17 12:11:37	information	system	FortiAnalyzer event	fazcfgd update link prefixes file: status='successful'.
2017-09-12 18:06:18	information	system	FortiAnalyzer event	Received new version 00012.00222-1709122344 for object '05004000NIDS02300'.
2017-09-12 18:06:18	information	system	FortiAnalyzer event	Received new version 00012.00222-1709122344 for object '05004000NIDS02200'.

Downgrading to previous firmware versions

FortiAnalyzer does not provide a full downgrade path. You can downgrade to a previous firmware release using the GUI or CLI, but this causes configuration loss. A system reset is required after the firmware downgrade. To reset the system, use the following CLI commands via a console port connection:

```
execute reset {all-settings | all-except-ip}
execute format {disk | disk-ext4 | disk-ext3}
```

Verifying FortiAnalyzer Upgrade Success

Once the upgrade is complete, check the FortiAnalyzer unit to ensure that the upgrade was successful. This section describes items you should check.

By default, the SQL database is disabled for the Collector mode in 5.4 and later to optimize performance. For a Collector with the SQL database enabled, the SQL database is disabled after upgrade. You can re-enable the SQL storage settings to view logs and analytics with the following CLI commands:

```
config system sql
   set status local
end
```

This section contains the following topics:

Verifying database rebuild success

Upgrade automatically triggers an SQL rebuild post upgrade to 6.0, which must complete for FortiAnalyzer to function normally. Verify the database rebuild status using the following CLI command:

```
diagnose sql status rebuild-db
```

Verifying device and ADOM disk quota

Run the `diagnose log device` CLI command after the upgrade and compare it to the output before the upgrade. Check that the device and ADOM disk quota allocations are correct. See CLI example of diagnose log device on page 9.

Verifying required daemons are running

Use the following CLI commands to check that the following daemons are running:

- `diagnose test application fortilogd 1`
- `diagnose test application sqllogd 2`
- `diagnose test application oftpd 2`

- `diagnose test application oftpd 3`
- `diagnose test application fazcfgd 2`

Checking Alert Message Console and notifications

After the FortiAnalyzer upgrade completes, check the *Alert Message Console* and list of notifications for any messages that might indicate problems with the upgrade.

- In *System Settings* > *Dashboard*, check the *Alert Message Console* widget.
- Click the Notification icon and review any notifications.

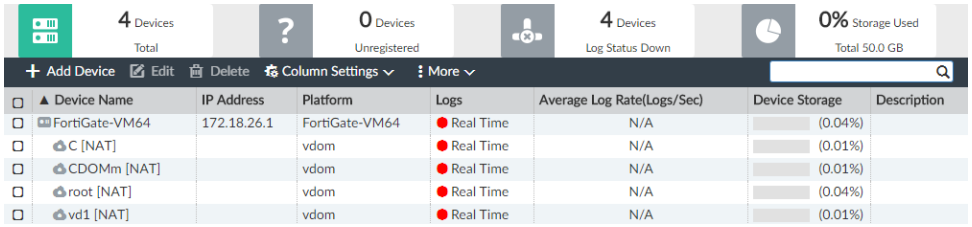
For information on accessing system settings, see Reviewing FortiAnalyzer System Settings on page 10.

Checking managed devices

After the FortiAnalyzer upgrade completes, check the managed devices in the GUI.

To check managed devices:

1. Refresh the browser and log back into the device GUI.
2. Go to *Device Manager*, and ensure that all formerly added devices are still listed.
3. In *Device Manager*, select each ADOM and ensure that managed devices reflect the appropriate connectivity state. Following is an example of the quick status bar in *Device Manager* where you can check the connectivity status of managed devices. It might take some time for FortiAnalyzer to establish connectivity after the upgrade.



4. Launch other functional modules and make sure they work properly.

Upgrade Policies for Log Storage

This section describes how the upgrade from FortiAnalyzer 5.2.x to 5.4.0 and later affects the disk allocation policy and the data retention policy, and it contains the following topics:

This section applies only when upgrading FortiAnalyzer 5.2.x to 5.4.0 and later because log storage policies changed in FortiAnalyzer 5.4.0.

Disk space allocation policy

For FortiAnalyzer 5.2 and earlier, disk space is allocated per device. Starting in FortiAnalyzer 5.4, disk space can be allocated per ADOM. Following is the policy governing disk space allocation when FortiAnalyzer is upgraded from 5.2 to 5.4.0 and later.

Normal ADOM mode

For FortiAnalyzer working in the Normal ADOM mode, after upgrading to 5.4.0 and later, the ADOM for each managed device (with or without VDOMs) is allocated the disk space of the device before upgrade plus 10%.

For example, a FortiGate device allotted 30GB in 5.2 gets 33GB (30GB + 10%) to the ADOM of this FortiGate device after the upgrade to FortiAnalyzer 5.4.0 and later.

Advanced ADOM mode

For FortiAnalyzer working in the Advanced ADOM mode, after upgrading to 5.4.0 and later, the disk space of the device is split among the VDOMs of different ADOMs proportional to the log distribution across the VDOMs. Each ADOM also gets 10% extra.

For example, the disk quota for Device-A is 10GB in 5.2. Device-A consists of three VDOMs: root VDOM (the management VDOM), VDOM1, and VDOM2, which are assigned to ADOM root, ADOM1, and ADOM2 respectively.

During the upgrade, FortiAnalyzer calculates that 10% of Device-A log files are from root VDOM, 30% from VDOM1, and 60% from VDOM2. Accordingly, FortiAnalyzer assigns 1.1GB (1GB + 10%) to ADOM root, 3.3GB (3GB + 10%) to ADOM1, and 6.6GB (6GB+ 10%) to ADOM2.

Additional policies

When the content files of the device, including DLP (data leak prevention) files, antivirus quarantine files, and IPS (intrusion prevention system) packet captures, use more than 40% of its disk quota, FortiAnalyzer adds extra space to the device.

ADOM disk quota is recommended to be at least 1GB in 5.4. If the disk quota of a device is less than 1GB before upgrading to 5.4.x, the ADOM quota for the device is adjusted to 1GB after upgrading to 5.4.x.

This adjustment might cause the total allocated disk space to exceed the actual device disk space. Verify using the `diagnose log device` command. If necessary, you can adjust the disk space back to less than 1GB.

Data retention policy

This section describes how the upgrade from FortiAnalyzer 5.2.x to 5.4.0 and later affects the data retention policy for existing and new ADOMs.

Existing ADOMs

For existing ADOMs, both Archive logs and Analytics logs are kept for 365 days + the age in days of the oldest Archive/Analytics logs respectively. For example, the oldest Archive logs of a device were generated on February 1, 2016, and the oldest Analytics logs were generated on March 1, 2016. Today is April 7. So the oldest Archive logs are 67 days old, and the oldest Analytics logs are 38 days old. After upgrade to 5.4.0 and later, FortiAnalyzer will keep the Archive logs for 365+67=432 days, and keep the Analytics logs for 365+38=403 days.

New ADOMs

For newly created ADOMs, Archive logs are kept for 365 days, and Analytics logs are kept for 60 days.

Supported Models

FortiAnalyzer version 6.0.12 supports the following models:

FortiAnalyzer	FortiAnalyzer VM
FAZ-200D	FAZ-VM64
FAZ-200F	FAZ-VM64-Ali
FAZ-300D	FAZ-VM64-AWS
FAZ-300F	FAZ-VM64-AWS-OnDemand
FAZ-400E	FAZ-VM64-Azure
FAZ-800F	FAZ-VM64-GCP
FAZ-1000D	FAZ-VM64-HV
FAZ-1000E	FAZ-VM64-KVM
FAZ-2000E	FAZ-VM64-OPC
FAZ-3000D	FAZ-VM64-XEN (Citrix XenServer and Open Source Xen)
FAZ-3000E	
FAZ-3000F	
FAZ-3500E	
FAZ-3500F	
FAZ-3700F	
FAZ-3900E	

Firmware Upgrade Paths

You can upgrade FortiAnalyzer 5.6.0 or later directly to FortiAnalyzer 6.0.12.

The following table identifies the supported FortiAnalyzer upgrade paths and whether the upgrade requires a rebuild of the log database. If you need information about upgrading to FortiAnalyzer 5.2 or 5.4, see the corresponding *FortiAnalyzer Upgrade Guide*.

Initial Version	Upgrade to	Log Database Rebuild
6.0.0 or later	Latest 6.0 version.	No
5.6.0 or later	Latest 6.0 version.	Yes
5.4.0 or later	Latest 5.6 version, then to latest 6.0 version.	Yes
5.2.0 or later	Latest 5.4 version, then to the latest 5.6 version, then to latest 6.0 version.	Yes
5.0.6 or later	Latest 5.2 version, then to the latest 5.4 version, then to the latest 5.6 version, then to latest 6.0.0 version.	Yes for 5.0.6, no for the rest

FortiGate units with logdisk buffer log data while FortiAnalyzer units are rebooting. In most cases, the buffer is enough to cover the time needed for FortiAnalyzer to reboot. However, Fortinet still recommends configuring multiple log destinations to ensure no logs are lost.

Fortinet Security Fabric

If you are upgrading the firmware for a FortiAnalyzer unit that is part of a FortiOS Security Fabric, be aware of how the FortiOS Security Fabric upgrade affects the FortiAnalyzer upgrade. You must upgrade the products in the Security Fabric in a specific order. For details, see the *FortiOS Fortinet Security Fabric Upgrade Guide* in the Document Library at https://docs.fortinet.com/product/fortigate/6.0.
