

Physical Topology:

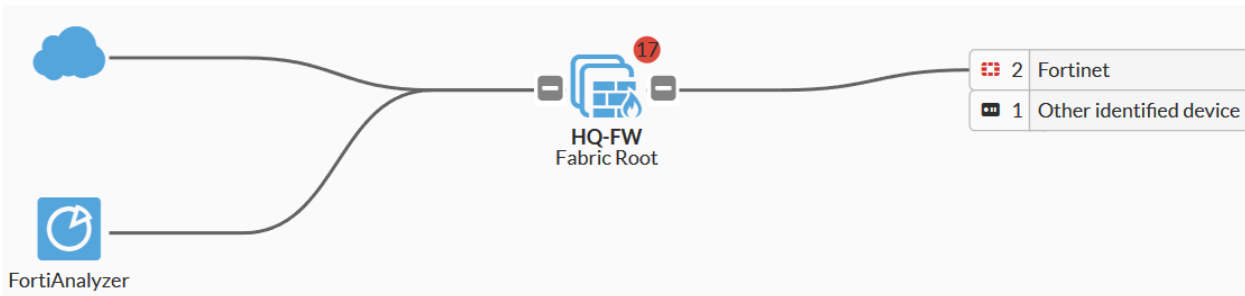

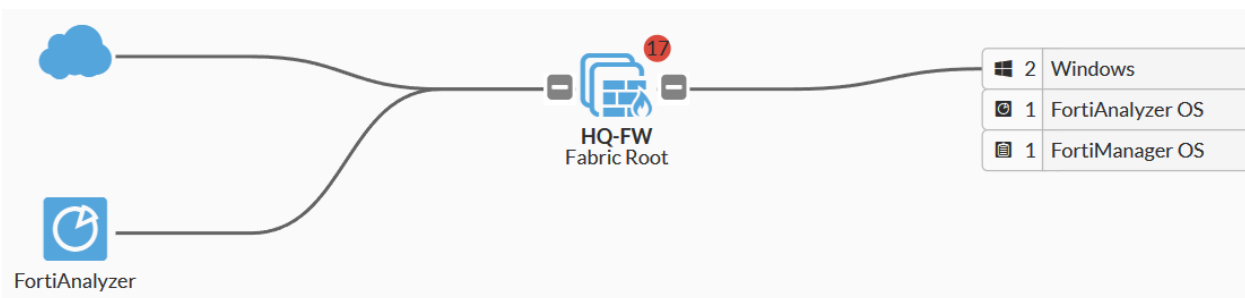

The full Security Fabric topology can be viewed on the root FortiGate. Downstream FortiGate devices' topology views do not include upstream devices. The Physical Topology shows the physical structure of your network, including all connected devices and the connections between them.

Physical Topology Views:

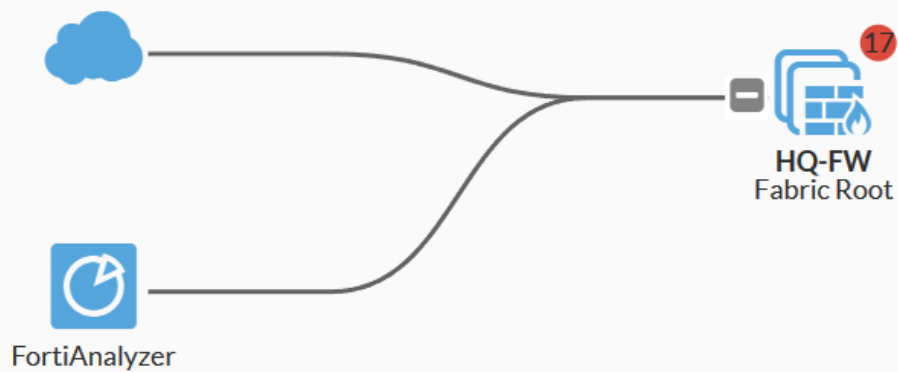

From the dropdown list beside the search bar, select one of the following views:

Device Traffic	Organize devices by traffic.
Device Count	Organize devices by the number of devices connected to it.
Device Operating System	Organize devices by operating system.
Device Hardware Vendor	Organize devices by hardware vendor.
Risk	Only include devices that have endpoints with medium, high, or critical risk values of the specified type All, Compromised Host, Vulnerability, or Threat Score.
No Devices	Do not show endpoints.

Logical Topology:

The Logical Topology shows information about the interfaces that connect devices to the Security Fabric. It shows the network interfaces, logical or physical, that are used to connect devices in the Security Fabric. The size of the bubbles in the topology vary based on traffic volume.
