

## Automation Stitches:

Automation Stitches can be used to automate certain actions in response to certain triggers. Automation stitches automate the activities between the different components in the Security Fabric, which decreases the response times to security events. Automation stitches can only be created on the root FortiGate in a Security Fabric. Automation stitches can also be used on FortiGate devices that are not part of a Security Fabric.

An automation stitch consists of two parts: the **trigger** and the **actions**. The trigger is the condition or event on the FortiGate that activates the action.

The stitch Action execution can be set to either **Sequential** or **Parallel**. In sequential execution, actions will execute one after another with a delay. If one action fails, then the action chain stops. This is the default setting. In parallel execution, all actions will execute immediately when the stitch is triggered.

Edit Automation Stitch	
Name	FW-Objects
Status	<input checked="" type="checkbox"/> Enable <input type="checkbox"/> Disable
Action execution <span>?</span>	<input checked="" type="checkbox"/> Sequential <input type="checkbox"/> Parallel
Description	Create Firewall Object 22/255

On the **Security Fabric > Automation** page, there are tabs for **Stitch**, **Trigger**, and **Action**. The **Stitch** tab is the default view that lists the trigger and actions used in each stitch. Individual triggers and actions can be created or edited in the corresponding tabs.
